

User Acceptance Testing (UAT) Template

Date	5 July 2026
Team ID	
Project Name	Book A Doctor
Maximum Marks	

Project Overview:

Project Name:

Book A Doctor

Project Description:

A full-stack MERN web application that allows patients to browse doctors, book appointments, and receive notifications. Admins can manage users, approve/reject doctor applications, and view all appointments.

Project Version:

v1.0.0

Testing Scope:

Features & Functionalities to Test

#	Feature	Description
1	User Registration	Register as Patient or Admin
2	User Login / Sign-In	Login with email & password, JWT token generation
3	Admin Dashboard	View all users, doctors, appointments
4	Doctor Approval	Admin approves or rejects doctor applications
5	Browse Doctors	Patients view list of approved doctors
6	Book Appointment	Patient books appointment with date & time
7	My Appointments	Patient views their own appointment history
8	Apply as Doctor	Patient applies to become a doctor
9	Notifications	Users receive and view notifications
10	Logout	Session cleared, redirect to login

Testing Environment

Field	Details
Frontend URL	http://localhost:5173
Backend API URL	http://localhost:8000
Framework	React (Vite) + Node.js + Express + MongoDB (In-Memory)

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	User Registration - Valid Data	1. Navigate to /register 2. Enter valid Name, Email, Password 3. Click "Register"	User account is created, success message is shown, and user is redirected to Login.	User account created, redirected to login.	Pass
TC-002	User Registration - Duplicate Email	1. Navigate to /register 2. Enter an email that is already registered 3. Click "Register"	Error message indicating email already exists.	Error message "User already exists" displayed.	Pass
TC-003	User Login - Valid Credentials	1. Navigate to /login 2. Enter valid Email and Password 3. Click "Login"	User is authenticated, token is generated, and redirected to Dashboard.	Authenticated, token stored, redirected to Dashboard.	Pass
TC-004	User Login - Invalid Credentials	1. Navigate to /lo-gin 2. Enter incorrect "	Error message "Invalid credentials" or similar is displayed.	Error message displayed, login prevented.	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Navigation to /register after successful registration was incorrect previously.	1. Fill registration form 2. Submit 3. Observe redirect destination	Medium	Closed	Fixed in recent commit. Redirects to /login properly now.
BG-002	Admin Dashboard component crashed due to <code>usr.role.toUpperCase()</code> when <code>usr.role</code> was undefined.	1. Login as Admin 2. View Users tab where a user has no role defined.	High	Closed	Handled missing role property or ensured default roles.
BG-003	API Proxy not forwarding /api requests correctly in development.	1. Start frontend 2. Attempt to login or fetch data	High	Closed	Added proxy configuration to <code>vite.config.js</code> .
BG-004	In-Memory MongoDB data resets on server restart.	1. Create a user 2. Restart Node server 3. Try to login with created user	Low	Open	Expected behavior for In-Memory DB, but should be noted for production deployment where a real MongoDB instance is needed.
