Project Name	Book A Doctor
Maximum Marks	2 Marks

Problem – Solution Fit:

1. Difficulty in Finding the Right Doctor

Problem: Patients struggle to identify suitable doctors based on specialization, location, or availability, leading to delays in care and frustration.

Solution: Provide a search and filter system where patients can browse doctors by specialization, location, availability, and ratings. Include detailed doctor profiles with qualifications, experience, and patient reviews to support informed decision-making.

2. Limited Access to Doctor Information

Problem: Patients rarely have access to transparent doctor profiles, making it difficult to choose the right doctor.

Solution: Create comprehensive doctor profiles with specialization, years of experience, consultation fees, availability schedules, and patient feedback. This empowers patients to make confident choices.

3. Time-Consuming Appointment Process

Problem: Manual or phone-based scheduling requires repeated calls or visits, wasting time and causing inconvenience.

Solution: Implement an online appointment booking system with real-time availability. Patients can instantly book, reschedule, or cancel appointments through the platform without needing phone calls or physical visits.

4. Uncertainty in Availability

Problem: Patients often don't know which doctors are available at a given time, leading to wasted trips and delays.

Solution: Integrate a real-time scheduling calendar that shows doctors' available slots. Patients can book directly into open slots, reducing uncertainty and improving efficiency.

5. Poor Communication & Missed Appointments

Problem: Without reminders or updates, patients may miss appointments or face last-minute cancellations.

Solution: Enable automated notifications and reminders via SMS, email, or app alerts. Provide instant updates for booking confirmations, cancellations, or rescheduling.
