

Project Design Phase
Proposed Solution Template

Date	5 July 2026
Team ID	
Project Name	Book A Doctor
Maximum Marks	2 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Patients face difficulty in finding the right doctor based on specialization, location, or availability. Manual or phone-based appointment scheduling is time-consuming, prone to errors, and lacks transparency, leading to frustration and delays in care.
2.	Idea / Solution description	Develop a centralized online platform where patients can search for doctors using filters (specialization, location, availability), view detailed profiles, and book appointments instantly.
3.	Novelty / Uniqueness	Unlike traditional booking systems limited to single hospitals, this solution provides a unified platform across multiple clinics and doctors. It integrates real-time availability, transparent doctor profiles, and patient reviews, offering a seamless and informed booking experience.
4.	Social Impact / Customer Satisfaction	The platform improves healthcare accessibility, reduces waiting times, and enhances patient confidence in choosing the right doctor. Automated reminders minimize missed appointments, while doctors benefit from better schedule management. Overall, it increases efficiency and patient satisfaction.
5.	Business Model (Revenue Model)	Revenue can be generated through subscription fees from doctors/clinics, commission per booking, premium patient services (priority booking, tele-reminders), and partnerships with healthcare providers. Optional integration with payment gateways adds convenience and monetization opportunities.
6.	Scalability of the Solution	The system can scale from local clinics to regional and national networks. Future expansions may include telemedicine integration, AI-based doctor recommendations, electronic health record management, and analytics dashboards for hospitals. Cloud-based infrastructure ensures scalability and reliability.
